# INTERVIEW QUESTIONS

// Question No.32"Discuss the default behavior of the `sort` method for strings and numbers. How would you use a custom comparison function to sort an array of objects by a specific property?"

Sort Method:

```
const arrayOfObjects = [  
  { name: 'John', age: 30 },  
  { name: 'Alice', age: 25 },  
  { name: 'Bob', age: 35 }  
];  
  
arrayOfObjects.sort((a, b) => a.age - b.age);  
  
console.log(arrayOfObjects);
```

// Output:

```
[  
  { name: 'Alice', age: 25 },  
  { name: 'John', age: 30 },  
  { name: 'Bob', age: 35 }  
]
```
