

JAVASCRIPT

INTERVIEW QUESTIONS

// Question No.28 "Create an object car with properties make, model, and a method startEngine that logs a message. Instantiate the object and call the method"

```
const car = {  
  make: 'Toyota',  
  model: 'Camry',  
  startEngine: function() {  
    console.log('Engine started! Vroom Vroom!');  
  }  
};
```

// (Note: In modern JavaScript, you can also use class syntax for object instantiation)

```
car.startEngine();
```

// Output:

Engine started! Vroom Vroom!
