# INTERVIEW QUESTIONS

// Question No.24 "Provide an example of using optional chaining within a loop to access a potentially missing property of an object."

```
const users = [  
  { name: 'John', address: { city: 'Canada' } },  
  { name: 'Bob' },  
  { name: 'Charlie', address: { city: 'Toronto' } }  
];  
  
for (const user of users) {  
  const cityName = user?.address?.city || 'Unknown';  
  
  console.log(`${user.name}'s city is ${cityName}`);  
}
```

// Output:

John's city is Canada

Bob's city is Unknown

Charlie's city is San Francisco
