JAVASCRIPT INTERVIEW QUESTIONS

```javascript
// Question No.24 "Provide an example of using optional chaining within a loop to access a
potentially missing property of an object."

const users = [
 { name: 'John', address: { city: 'Canada' } },
 { name: 'Bob' },
 { name: 'Charlie', address: { city: 'Toronto' } }
];

for (const user of users) {

 const cityName = user?.address?.city || 'Unknown';

 console.log(`${user.name}'s city is ${cityName}`);
}
```

```
// Output:
    John's city is Canada
    Bob's city is Unknown
    Charlie's city is San Francisco
```
