JAVASCRIPT INTERVIEW QUESTIONS

```javascript
// Question No.16 "Question No.15 "How does the optional chaining operator (?.) work, and
how can it be used to access nested properties of an object? "

const person = {
 name: 'John',
 address: {
  city: 'New York',
  zipcode: '10001',
 },
 hobbies: ['reading', 'coding'],
};
const cityName = person.address?.city;
const postalCode = person.address?.zipcode;
const country = person.address?.country;

// Output:

console.log('City Name:', cityName);      City Name: New York
console.log('Postal Code:', postalCode);  Postal Code: 10001
console.log('Country:', country);         Country: undefined
```
